Cellular and Molecular Research Center (CMRC)

Cellular and Molecular Research Center of Qom University of Medical Sciences was managed to receive an agreement in principle and formal establishment in 2017 from the Ministry of Health and Medical Education. The center hopes to take advantage of the potentials of the faculty and other researchers to demonstrate itself in the future as a leading, creative and authentic center in performing basic and applied research in terms of the molecular and cellular basis of diseases.

Priorities:

- Preparing grounds for innovation and productivity, as well as attracting skilled human resources in investigating genetics aspects of metabolic and multifactorial diseases in order to observe their epidemiological and statistical aspects;
- Collaborating with other centers for training the human resources in Cellular and Molecular techniques, and holding short-term and long-term workshops;
- Performing basic clinical and epidemiological researches in order to reform health care of country in order to responding of Islamic community necessity
- Training of human researcher resources in medical and paramedical fields

Qom University of Medical Sciences

Vice-Presidency for Research and Technology

Research Centers

Research Center for Environmental Pollutants (RCEP)

Growing of development index can cause harmful effects on human and environments in the scale of global, regional and national. Emerging pollutants as environmental pollution treat for human health and environments. However, decision making in this situation, especially in developing countries, should be on scientific and research foundations. To respond to these needs, Research Center for Environmental Pollutants (RCEP) as one of the research centers of Qom University of Medical Sciences was established.

RCEP scope

- Detection, tracking and risk assessment of environmental pollutants
- Preparation of executive manual for the detection and control of environmental chemical and microbial pollutants.
- Professional consulting for regional and national industry.
- Academic collaboration for the definition, design, and implementation of the projects.
